

# CODEBOOK

Level of Living Survey

2010

## Introduction

This is the codebook for the main sample of the Level of Living Survey 2010 (LNU 2010). The structure of this codebook is essentially the same as in previous versions of the codebook, i.e. the codebooks of LNU 1968, 1974, 1981, 1991 and 2000. The variables in LNU 2010 have the prefix Z, while variables of LNU 2000 have the prefix X, variables of 1991 have the prefix Y, variables of 1981 have the prefix U, variables of 1974 have the prefix V, and variables of 1968 have the prefix W. The codebook contains directions to identical or comparable variables in the five previous versions of the survey. The codebook also contains, above and all, frequency tables for most of the included variables.

The sampling frame for LNU 2010 is, as with LNU 2000, constituted of individuals within the age interval 18-75 years (born 1935-1991). In previous level of living surveys, the age intervals have been 15-76 years (1968, 1974 and 1981) and 17-76 years (1991). For a more detailed description of population and sampling procedure, data collection procedure, response rates, missing data analysis, weights etc., see the technical report: *Teknisk rapport. En beskrivning av genomförande och metoder. Levnadsnivåundersökningen 2010.*

The main sampling frame of the Level of Living Survey 2010 edition initially reached 7,404 individuals. Among these, 151 were no longer considered to be a part of the sampling frame at the time of the interview. Interviews were conducted with 4,415 out of the remaining 7,253 individuals. The response rate is therefore about 60.9 percent (4,415/7,253). These individuals form the basis of all frequency tables in the codebook (number of respondents for specific questions is lower in some instances, due to internal missing values or that the question was not asked to everyone). Variables Z864-Z894 are based on the so-called personality questionnaire that was answered after the main interview. For these questions, the response rate was lower (3,864 i.e. 53.3 percent).

The tables are, with slight variations, designed the same way throughout the codebook. In order to facilitate interpretation, the different parts of the tables are described and explained below (see next page).

The main LNU has, in later years, been complemented with some additional surveys. Since LNU 2000, spouses and partners of the main respondent, who lives in the respondent's household, have been offered to complete the so-called Partner-LNU. This survey is less extensive and consists of a questionnaire sent out by mail. In LNU 2010, 3,347 spouses/partners of the main respondents were identified and 2,522 answered the questionnaire for Partner-LNU. This means that the response rate was 75.4 percent

- Variable number.** Every variable has a serial number, which can be used as identification when processing data.
- Variable name.**
- References** to corresponding variables in LNU68, LNU74, LNU81, LNU91 and LNU00. Jfr (compare) means that the variable (or question) doesn't have exactly the same construction in the other surveys. Note that the possible answers can be different even if the question that the variable is based on is identical for all years.
- The exact wording of the question** and/or an explanation of the construction of the variable and selection, if any (i.e. information on who the table is valid for).
- The code**, that in this example equals number of years. Some variables, like this one, are divided into categories. Note that the categories can be of different sizes. If the code equals a possible answer (e.g. 1=YES), this is stated.
- Number of respondents.**
- Percentage** is calculated based on the number of respondents. Percent is not calculated for decline and the like.
- The category that is **not selected** and how large this is.
- Mean value and Standard deviation.** The Mean value and the Standard deviations for variables divided in categories are calculated based on actual values and not interpolated medians.

(2,522/3,347). The data of Partner-LNU is presented in the variables PZ1-PZ110 below.

Since LNU 2000, the so-called Child-LNU has also been conducted. Children aged 10-18 years, who live in the household of the respondent, are offered to respond to an audio questionnaire about their living conditions. In LNU 2010, 1,283 children fitted the sampling

frame and 923 answered the audio questionnaire for Child-LNU. This means that the response rate was 71.9 percent (923/1,283).

Children who participated in Child-LNU 2000 were re-interviewed as young adults (20-28 years old) in 2010. This time they answered the main questionnaire. In this survey called Young-LNU, 1,485 young adults fitted the sampling frame and 929 were interviewed. This means that the response rate was 62.6 percent (929/1,485).

At the end of the data collection process for LNU 2010, persons who previously declined to participate were given the possibility to answer a much smaller short version of the main questionnaire, either through mail or by telephone. In total, counting both LNU and Young-LNU, 915 persons used this possibility. The total response rate of LNU 2010, including respondents of the short questionnaire, reaches 72.0 percent (6,259/8,889).

More information about the Level of Living Survey and its different complementing surveys is available at [www.sofi.su.se/english/research/three-research-departments/lnu-level-of-living/documentation](http://www.sofi.su.se/english/research/three-research-departments/lnu-level-of-living/documentation). Here you can also find questionnaires, the technical report and other documentation.

LNU-data is located and accessible for internal users (the LNU-group at SOFI) on the server of the Swedish Institute for Social Research at *X:\LNU-M\LNU 2010\LNU2010\_DATA*. External users can apply for access to LNU-data at [www.sofi.su.se/english/research/three-research-departments/lnu-level-of-living/apply-for-lnu-data](http://www.sofi.su.se/english/research/three-research-departments/lnu-level-of-living/apply-for-lnu-data).

Finally, I would like to thank everyone who made the Level of Living Survey 2010 possible. First and foremost, the respondents, of course, deserve huge credit for giving us their time in hourly long interviews, telling us about their lives. I would also like to thank our collaborators at Statistics Sweden and its interviewers, who have travelled around the whole country in order to conduct the interviews. The LNU-group also deserves credit for their work with the questionnaires, the data, the variables and, not least, this codebook. To conduct a study in the size of the Level of Living Survey cost a lot of money. Without generous grants from Forte, Riksbankens Jubileumsfond and Vetenskapsrådet it would not have been possible. Thank you!

Stockholm March 2015  
Michael Gähler  
Director for LNU 2010
